<u>Capstone Project – Medicare</u>

<u>Project Objective & Background:</u> My Medicare portal is an frontend online e-commerce web application with a rich and user-friendly interface developed using Angular framework and also dynamic and responsive web application for ordering items online for different products.

Name: - Anurag Sharma

Github: - https://github.com/Instantgaming2356/JAVAFSD-CapstoneProject

Core Concepts used for Project:

- 1. Java 1.8
- 2. Maven 3.x.x
- 3. Spring Boot 2.2.1.RELEASE
- 4. Spring Security
- 5. JWT (Json Web Token package)
- 6. Spring Data JPA
- 7. MySQL
- 8. H2-Database
- 9. PostgreSQL
- 10. Lombok
- 11. Git and GitHub
- 12. Agile Scrum Methodology
- 13. Docker
- 14. Jenkins
- 15. Angular 11
- 16. Angular Material
- 17. Bootstrap 5.1
- 18. HTML
- 19. CSS
- 20. JAVASCRIPT

Sprint Planning

The Implementation is done in Eight sprints which are mentioned below.

Sprint 1:

Goal: Set up the project, define the architecture, and implement the basic functionality of the web application.

- Set up the development environment and create the project structure.
- Define the architecture of the web application, including the database schema, APIs, and user interface components.
- Implement the login and registration functionality.
- Implement the CRUD operations for the medicine categories.

Sprint 2:

Goal: Implement the main features of the web application, such as searching and ordering medicines, and ensure that the application is responsive.

- Implement the search functionality for medicines, including filtering and sorting options.
- Implement the shopping cart and checkout functionality.
- Implement the user profile page and settings.
- Ensure that the web application is responsive, i.e., it looks good and functions well on different devices and screen sizes.

Sprint 3:

Goal: Improve the user experience of the web application by adding features such as reviews, ratings, and recommendations.

- Implement the review and rating functionality for medicines.
- Implement the recommendation system for medicines based on user preferences and purchase history.
- Implement the notification system for important events, such as order confirmation and shipment.
- Improve the user interface and user experience based on feedback from users and stakeholders.

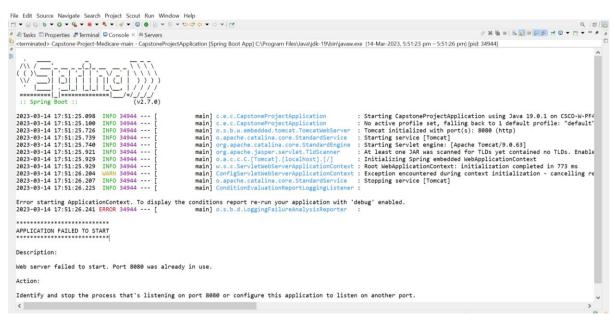

Sprint 4:

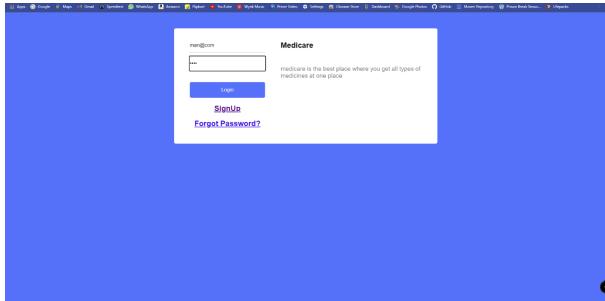

Goal: Testing, Deployment, and CI/CD.

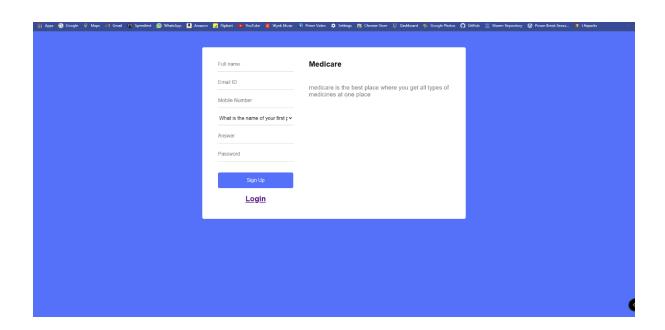

- Implement automation testing to test the application thoroughly.
- Set up a CI/CD pipeline using Jenkins to automate the build and deployment process.
- Deploy the application on an AWS EC2 instance.

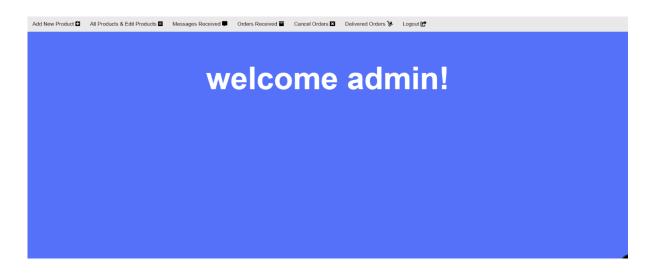

• Ensure the application is secure by implementing necessary security features like HTTPS.
